

Claim 34 (Amended) An isolated nematode major sperm protein domain,
comprising: a polypeptide including about 125 consecutive amino acids of a nematode
major sperm protein, wherein the domain stimulates a female sexual maturation.

AG

Claim 35 (Amended) The major sperm protein domain of Claim 34,
wherein the polypeptide includes a segment having at least 10 consecutive amino
acids to 20 consecutive amino acids of the nematode major sperm protein, wherein
the segment stimulates a sheath cell contraction.

Claim 36 (Amended) The major sperm protein domain of Claim 34,
wherein the polypeptide includes a segment having 10 to 30 amino acids of the
nematode major sperm protein, wherein the segment stimulates a sheath cell
contraction.

Claim 37 (Amended) An isolated nematode major sperm protein domain,
comprising: a polypeptide including about 125 consecutive amino acids as set forth
in SEQ ID NO:2 or nematode major sperm protein alignment variants thereof,
wherein the domain stimulates a female sexual maturation.

Claim 38 (Amended) The major sperm protein domain of Claim 37,
wherein the polypeptide includes a segment having at least 10 consecutive amino
acids to 20 consecutive amino acids, wherein the segment stimulates a sheath cell
contraction.

A6
cont.

Claim 39 (Amended) The major sperm protein domain of Claim 37,
wherein the polypeptide includes a segment having 10 to 30 amino acids, wherein
the segment stimulates a sheath cell contraction.
